Environmentally Friendly & Lower Cost Manufacturing

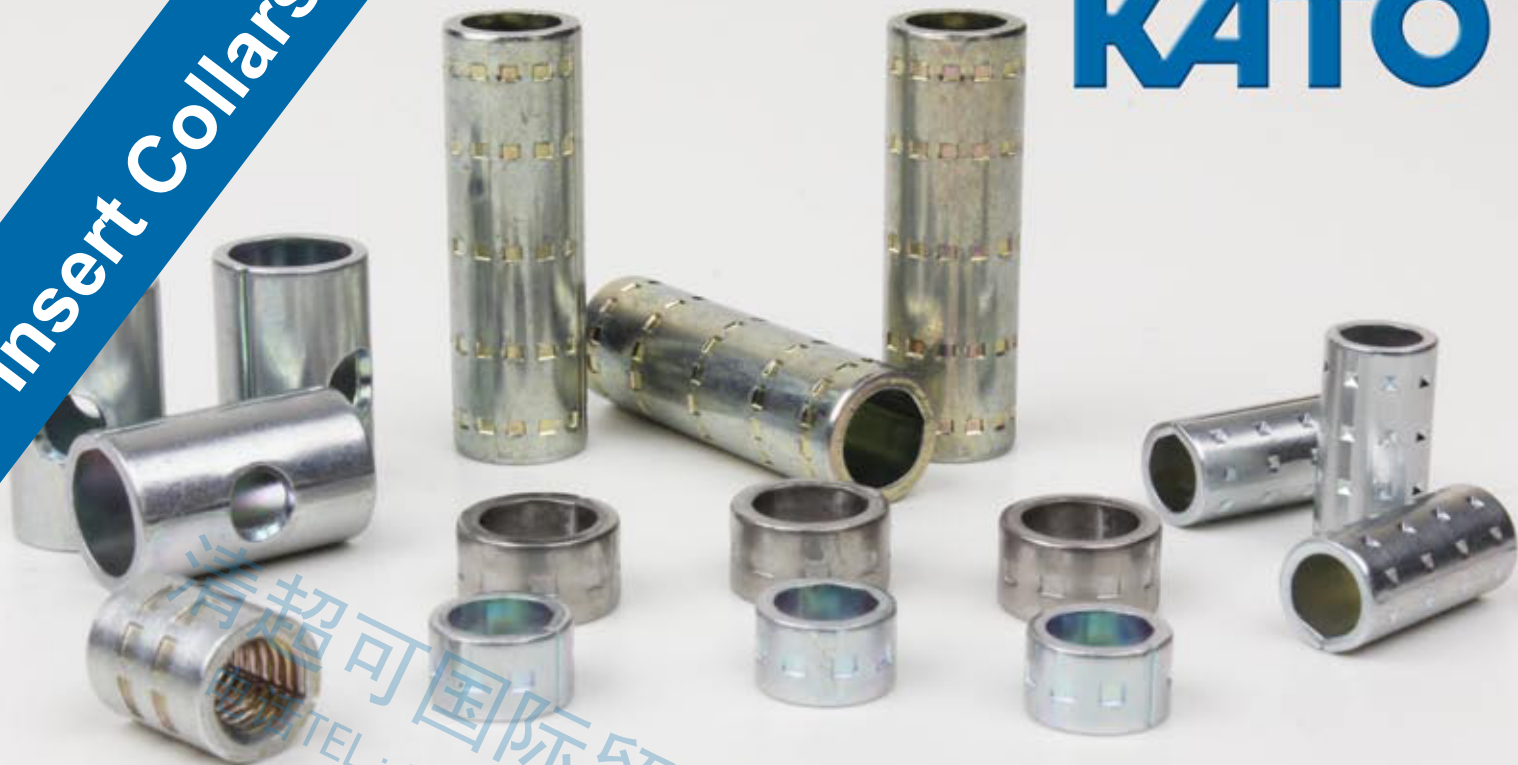

KATO Insert Collars are manufactured using highly advanced precision stamping and coiling processes developed by Advanex. This process offers manufacturing and cost benefits when compared to solid tube and knurled compression limiters. No machining is performed on KATO Insert Collars, so there's minimal or zero material scrap, no chips, and no oil residue. Fast, clean, and FOD Free!

Features & Benefits

- Prevents damage to parent material.
- Designed for molded-in applications.
- Superior retention and anti-rotational characteristics.
- Lower Cost than solid tube and knurled limiters.
- Custom designed for your application.

Insert Collars

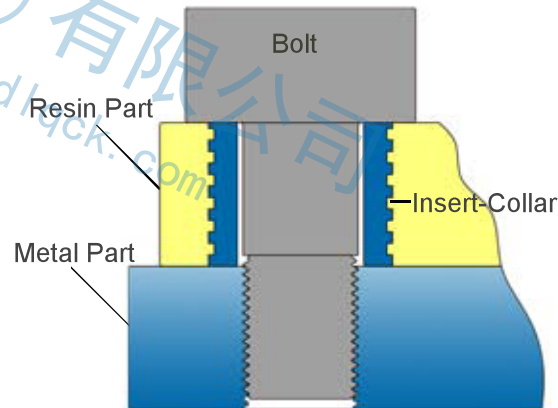

KATO®

Design

KATO Insert Collars are manufactured from high strength carbon steel (per ASTM A1008). A zinc-nickel with clear chromate plating is applied for exceptional corrosion resistance.

KATO compression limiters utilize Prism shaped impressions to provide superior pullout and retention capability when compared to plain tube, split seam, grooved, and even solid knurled designs. KATO offers custom designed impressions like Prism + Spiral Belt, Pyramid, and Pyramid (no taper) to meet application requirements.

Less than 0.1 mm gap ensures no leaking of plastic.

Prism

Prism+Spiral Belt

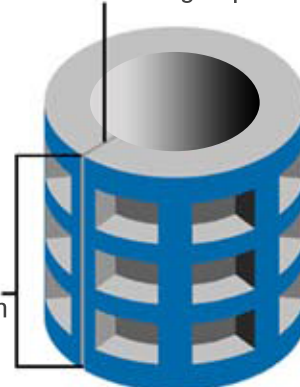

Pyramid

Pyramid (no taper)

Height Tolerance ± 0.005 mm
vs. Competition $\pm 0.15 - 0.20$ mm
